Your Source for Exceptional Care

About BayCare Medical Group

BayCare Medical Group is Tampa Bay's largest multispecialty physician group, with more than 600 providers practicing in 46 specialties at more than 170 locations.

Your Source for Primary Care

Health care is intensely personal. You need a physician who provides a sense of security and trust. BayCare Medical Group primary care physicians build a real relationship with you. You'll receive excellent, compassionate care, close to home.

- Find your new primary care physician at Doctors.BayCare.org or (844) My-BMG-Dr (844-692-6437).
- Most insurances are accepted.
- Same day, early morning and late evening appointments are offered.

Learn more about us at BayCareMedicalGroup.org.

Your Specialist Resource

BayCare Medical Group specialists focus on quality, personalized care. All specialists are board certified and highly experienced. If you need help finding a specialist, our Customer Service Center can help you: (855) 466-6686

Close to cancer experts. Closer to what you love.

Florida Cancer Specialists' top-ranked cancer experts provide the most advanced treatments in our local community.

From genetic screening to immunotherapies, our quality care brings effective, targeted treatment to you so you can stay close to home.

We take care of all the big things in cancer care, so you can focus on all the little moments that matter—every step of the way.

Heart Disease Indicators for Women Are Often Ignored

Hearth Disease is the number one killer of women, taking 1 out of 3 women's lives each year.¹ One woman dies every 80 seconds from cardiovascular disease.

Men and women have different signs and symptoms when it comes to stroke and heart attack. Women's symptoms often get ignored or are attributed to another condition.

Female Heart Attack Symptoms

- Excessive sweating
- Sleep disturbances
- Shortness of breath
- Jaw pain
- Shoulder pain
- Upper back pain
- Neck pain
- Nausea
- Abdominal pain
- Fatigue

It's not uncommon to hear stories about women who appear healthy and have no significant symptoms yet suffer from stroke or a heart attack.

Dr. Jason C. Levine, Interventional Cardiologist, recently saw a female patient with a similar story.

"It was an unusual case in the sense that this patient was a female in her 40s with no risk factors and lived a very healthy lifestyle." Dr. Levine explained, "She ate a healthy diet, exercised regularly, and appeared to be extremely healthy.

"While working-out one day in the gym, she just felt like something was off. She didn't have the classic symptoms, such as the sensation of an elephant on her chest, numbness in the arm, pain in the jaw, or any other common warning indicators.

"She said she felt tired and "off-kilter" and knew something was wrong. Her friend encouraged her to go to the hospital. Once I saw her, we performed an electrocardiogram, which suggested that she was having a heart attack. At this time, we emergently brought her in for a cardiac catheterization. These images show intricate details of the arteries within the heart. She had a blockage that required a procedure where we placed a stent in the heart to open up the artery and allow adequate blood flow. We put her on medication to help impede the formation of plaque buildup in the arteries, and she will now need to see a cardiologist regularly to monitor her symptoms.

Because she didn't have hypertension, high cholesterol, and no lifestyle risk factors like smoking, excessive alcohol, poor nutrition, or a sedentary lifestyle, it's an unusual case. This patient was unaware of any family history of blockages or heart disease, so we're uncertain if that affected her disease state.

"40% of women with heart attacks may have little or no symptoms. If you feel a bit off, exhausted, or anything abnormal, you should see your physician or go to the hospital if you have a major issue. Don't ignore your symptoms or your sense of feeling unwell."

The American Heart Association's 10 Facts About Women and Heart¹

1. Cardiovascular disease kills more women than all forms of cancer combined, and yet only 44% of women recognize that cardiovascular disease is their greatest health threat.
2. Among females 20 years and older, nearly 45% are living with some form of cardiovascular disease, and less than 50% of women entering pregnancy in the United States have good heart health.

References:

1. American Heart Association, Go Red for Women, Heart and Stroke Symptoms in Women, <https://www.goredforwomen.org/en/about-heart-disease-in-women/facts>

3. Cardiovascular disease is the No. 1 killer of new moms and accounts for over on-third of maternal deaths. Black women have some of the highest maternal mortality rates.

4. Overall, 10% to 20% of women will have a health issue during pregnancy, and high blood pressure, pre-eclampsia, and gestational diabetes during pregnancy greatly increase a woman's risk for developing cardiovascular disease later in life.

5. Going through menopause does not cause cardiovascular disease, but the approach of menopause marks a point in midlife when women's cardiovascular risk factors can accelerate, making an increased focus on health during this pivotal life stage is crucial.

6. Most cardiac and stroke events can be prevented through education and lifestyle changes, such as moving more, eating smart, and managing blood pressure.

7. 51.9% of high blood pressure deaths, otherwise known as hypertension or the "silent killer," are in women, and out of all women, 57.6% of Black females have hypertension — more than any other race or ethnicity.

8. While there are an estimated 4.1 million female stroke survivors living today, approximately 57.5% of total stroke deaths are in women.

9. Women are often less likely to receive bystander CPR because rescuers often fear accusations of inappropriate touching, sexual assault, or injuring the victim.

10. Women continue to be underrepresented in Science, Technology, Engineering, and Math (STEM) fields, as well as in research. In fact, women occupy nearly half of all U.S. jobs (48%) but only 27% of jobs in STEM fields. Furthermore, only 38% of participants in clinical cardiovascular trials are women.

More on Heart Disease

Heart disease is the narrowing of the arteries over time due to a buildup of plaque that can, in some cases, cause a complete blockage of the blood vessels or coronary arteries.

When hormones are out of balance, additional factors such as high cholesterol, high blood pressure, and weight gain may coincide. The same can be said for stress and anxiety. If stress or depression is left unmanaged, it can lead to adverse effects on the cardiovascular system.

Living a healthy lifestyle is critical, but if you have a history of heart disease or a history of lifestyle choices that may have damaged your cardiovascular system, getting a screening or certain procedures is advised. These can include blood tests, stress tests, EKGs, Holter monitors, vascular ultrasounds, and scans.

Many people with heart disease are placed on medications such as ACE inhibitors, alpha-beta blockers, and cholesterol-lipid-lowering drugs.

Seeing a cardiologist is imperative if you have heart disease, symptoms, or a family history of cardiovascular issues.

Dr. Levine is now accepting new patients aged 18 and older. Most major insurance plans are accepted.

Internal Medicine – Winthrop University Hospital; Mineola, New York

Fellowships

- Cardiology – University of Medicine and Dentistry of New Jersey; Newark, New Jersey
- Interventional Cardiology – University of Maryland School of Medicine; Baltimore, Maryland

DNA HAIR REGENERATION & STEM CELL FACELIFT

John Satino is passionate about so many new technologies in the cosmetic industry. Healing our bodies comes from within. DNA and Stem Cells are natural ingredients from our bodies that can make us look younger, feel healthier, repair injuries, and potentially solve our own "problems". Biomedical Engineering is not a new science: pacemakers and organ transplants were some of its earliest successes. Today we have so many aesthetic uses for stem cells that even Dolly the cloned sheep seems like centuries-old news.

Health and Wellness Magazine was pleased it sit down with NASA consultant John Satino and discuss his 2012 discovery of Stem Cell Face Lifts. Human plasma proteins combined with platelet-rich plasma sounds fascinating but wait until you see the results.

Health and Wellness Magazine asked: Mr. Santino, how can the Stem Cell Face Lift change my life?

Mr. Santino: Up until now, you had one choice to combat the signs of aging, and that was surgery. Beyond the out-of-pocket cost of a traditional facelift, there is risk and an extended recovery time. And it's possible that after the surgery, you end up looking like your face was in a wind tunnel at a hundred miles per hour for an extended period of time.

Thinner, older, tightly stretched skin can look very unnatural. Our patients look totally natural, rested, and as if they had been on vacation. All with no downtime. Many say this new technology changes their lives. And the risk is undoubtedly less.

H&W: Tell the readers about a patient you have helped recover from an injury with this technology.

Mr. Santino: We have helped patients with facial irregularities such as a birth mark. Severe acne scarring can definitely be improved and corrected. Often a stroke can affect the face. In the case of a stroke, we can treat only the affected side of the face for a natural symmetrical correction.

Before and After - 1 Hour

H&W: How do stem cells reverse aging?

Mr. Santino: Stem Cells are the body's growth factor. They are immortal. You produce stem cells for life from the bone marrow. Not as many at age eighty as at age twenty, but your body produces stem cells throughout your entire life.

For example, if you get a cut or injury, a signal is released to the bone marrow to release these growth factors. The stem cells travel through the blood system to the injury to promote healing. At the site of the injury, the stem cells help heal and develop bone, skin, blood, or specialized cells necessary for the body to heal itself.

Therefore, an injury heals very quickly when you are young due to the more plentiful number of stem cells available. These stem cells are not as plentiful as we age, and injuries take longer to heal. In compliance with current FDA rulings, we can extract body tissue, fat, or blood from your OWN body and concentrate it on a four-to-one basis in our lab. This means we are essentially reintroducing four times younger cells into the face. This leads to increased collagen, elastin and skin tightening in a very short time when we reintroduce your OWN stem cells back into your OWN body.

John Satino, Clinical Director and Research Coordinator

John Satino's primary training in Chinese acupuncture was received in 1971. Additionally, he was the principal developer of Elector-Acupuncture in the US in 1973 and the Research Coordinator for Biotone International and Wright State University's development of Elec-

tronic Muscle Stimulation to reverse Leg Muscle Atrophy in Spinal Cord Injuries in 1977. John worked as a Research and Development Consultant for NASA's Biomedical Department at Kennedy Space Center in 1983 for the development of E.M.S. to prevent Leg Muscle Atrophy. In 1991 he was the Research Coordinator for Merck Pharmaceutical's clinical trial of Finasteride (Propecia). Dr. Satino has also been published in The Hair Journal, and The International Journal of Cosmetic Surgery and Aesthetic Dermatology.

PICKLEBALL: FIVE STRETCHES TO PREVENT INJURY

By Regenexx at New Regeneration Orthopedics

Have you heard of Pickleball? If you have, you know it's a sport rapidly-rising in popularity and making major waves in the recreational sport and the professional sports scenes. This sport also was recently boosted in the media when seven-time SuperBowl Champion Tom Brady invested in a professional Pickleball team in Major League Pickleball (MLP).

How did Pickleball Start?

Although today we see professional tournaments and star-studded endorsements of the sport, Pickleball had humble beginnings. The game of Pickleball was invented in 1965 by three dads, trying to come up with a way to entertain their kids who were "bored" while on summer break. They had access to a Badminton court, ping-pong paddles and a perforated plastic ball. They created a game with simple rules and evolved the court over the weekend to have a lowered net and a harder surface. Just two years later, one of the original dads built an official Pickleball court and popularity organically grew until it was played in all 50 states by 1990. With continuing growth and development, the new USA Pickleball Association (USAPA) was established in 2003 and has grown to reach the 50,000 milestone and ended 2021 with just over 53,000 members.

The Basics of what you need to know about the game of Pickleball is succinctly described by the USA Pickleball organization:

- 1 A fun sport that combines many elements of tennis, badminton and ping-pong.
- 2 Played both indoors or outdoors on a badminton-sized court and a slightly modified tennis net.
- 3 Played with a paddle and a plastic ball with holes.
- 4 Played as doubles or singles.
- 5 Can be enjoyed by all ages and skill levels

Injuries Related to Pickleball

Locally, we can attest to the rising popularity of the sport, as the Tampa Bay, St. Petersburg, and Sarasota areas have appreciated Pickleball courts as additions to parks and clubs. With this growing popularity, that means we tend to see a growing number of injuries related to Pickleball in our Regenexx at New Regeneration Orthopedics offices. The Pickleball injuries we have seen, for the most part, are due to overuse.

The overuse injuries we have seen from our Pickleball athletes have included:

- Lateral Epicondylitis (Tennis Elbow)
- Medial Epicondylitis (Golfer's Elbow)
- Rotator Cuff Tendonitis
- Wrist Sprain
- Knee Pain
- Low Back Pain

These common overuse injuries help us to identify the wrist, elbows, shoulder, low back, and knees as the most common areas susceptible to aches and pains with increased Pickleball play. So, if you got a new Pickleball kit, here are five stretches to do before and after you hit the court, to prevent you from slowing down your game.

**Note: These stretches are example recommendations, and you should always consult your physician before beginning any new fitness regimen.*

EXERCISES TO PREVENT INJURY

1 Wrist Flexor Stretch

- With your elbow straight and your palm facing up (forearm in a supinated position), extend the wrist and grab the fingers with your free hand.
- Gently pull your fingers and wrist in extension toward the floor.
- Hold the stretch for the recommended time.

2 Pec Stretch

- Stand up next to a wall corner or in a doorway.
- Place your forearm along the wall, with your upper arm raised 90° from your body.
- Lean your body forward until you feel a stretch across your chest.
- Hold for 30-90 seconds, rest and repeat three times.

3 Child's Pose With Rotation

- Start on all fours and push your hips back so your buttocks rest on your heels. You may want to have your knees apart to be more comfortable.
- Reach forward with your hands and hold the stretch for 30-90 seconds.
- Next, reach to one side with both hands and hold the stretch for 30-90 seconds.
- Then, reach to the other side and hold the stretch for 30-90 seconds.

4 Hip Flexor Stretch

- Position yourself in a half-kneeling stance with the leg to stretch placed behind.
- Lean forward at the hip while twisting your trunk toward the front leg hold for 60 seconds.
- Repeat on the other side.

5 Quad Stretch

- Stand in front of a chair or a stable object and hold on to it with one hand.
- Grab the top of one ankle with one hand and pull your foot towards your buttock until you feel a gentle stretch in front of the thigh.
- Hold the stretch for 60-90 seconds, keeping your lower back neutral (not arching) and return to the initial position. The goal is to be able to gently, over time, be able to touch your knee to your buttock without strain.
- Repeat on the other side.

WE'RE HERE TO HELP

If wrist, elbow, shoulder, back or knee pain are interfering with your Pickleball game, our physicians at Regenexx at New Regeneration Orthopedics are a great starting point to get a comprehensive evaluation, and an honest recommendation of what the best course of action for you would be. Our goal is to keep you out on the Pickleball court, pain free!

The Season of Love: Give Yourself and Your Partner the Gift of GAINSwave

BY DR. ROBERT LUPO, D.C.

Is your relationship lacking? It's common to experience lulls in the romance department, especially if you are suffering from erectile dysfunction. ED can not only inhibit performance, but it often takes its toll on men and their partners emotionally and mentally.

Although it's a common condition, it can be a crushing disorder that wreaks havoc on a man's psyche, which in turn, can cause severe anxiety and further intensify erectile dysfunction and low libido.

What if you didn't have to worry about your situation any longer? What if you didn't need to rely on a little blue pill and wait for its effect to kick in? ED pills only mask the symptoms of ED, but DO NOT treat the cause.

GAINSwave is an innovative treatment option for ED that provides remarkable results without drugs or surgery.

Treat ED's Cause with GAINSwave

GAINSwave treats erectile dysfunction at its core. The GAINSwave is a revolutionary, non-invasive treatment that addresses the underlying causes of ED. GAINSwave uses scientifically proven technology through sound waves to stimulate blood circulation, tissue regeneration, and removes plaque build-up. Traditional treatments for ED, such as pills or injections, lose effectiveness over time and have to be used every time a man wants to engage in sexual activity.

GAINSwave is proven to break up scar tissue and plaque, which are often the root cause of ED. GAINSwave can rejuvenate and turn back the clock, leaving men with the vigor and stamina from their youth.

GAINSwave is also the number 1 bio-hack for men without ED just wanting to have harder, healthier, and stronger erections than they experience now!

Dr. Lupo, Founder of the Physical Medicine Center treats the root cause of ED. In addition to these conditions, Dr. Lupo provides the most advanced groundbreaking technology and procedures for his patients, and when it comes to ED, GAINSwave is supreme.

GAINSwave utilizes high frequency, low-intensity soundwaves to improve blood flow to the penis, remove micro-plaque, and stimulates the growth of new blood vessels. GAINSwave uses a specific protocol designed to optimize efficacy, safety, and results. Over 80% of Erectile Dysfunction (ED) issues are caused by reduced blood flow. GAINSwave has developed a protocol to treat ED and Peyronie's disease (scar tissue) as well as enhance sexual performance.

It's Never too Late

Men who are just beginning to see ED warning indicators should seek the earliest treatment possible. The reason is that it has been well documented that if early diagnosis and treatment are started when a man is younger (the 30s, 40s, 50s) there is an increased chance that the ED will very likely no longer need medical treatment and their arteriosclerosis can dissipate. There have been multiple peer-reviewed studies that indicate that GAINSwave treatment can potentially cure ED in some patients. The sooner you intervene with treatment, the better your outcome will be, but it's not too late. GAINSwave has helped many patients with advanced ED conditions.

Almost everyone will experience a decline in sexual functioning. But with the advent of Regenerative medicine, Erectile Dysfunction is no longer an inevitable part of aging. GAINSwave is based on a series of over 30 clinical studies showing a greater than 75% success rate in treating Erectile Dysfunction (ED).

Give yourself and your partner the gift of GAINSwave

DON'T JUST MASK YOUR SYMPTOMS—TREAT THE ROOT CAUSE!

If you want drug-free alternative options for your health needs, look no further than the Physical Medicine Center in north Tampa. The Physical Medicine Center treats both male and female patients who desire alternative therapies to get to the root cause of their conditions.

Call them today at 813-607-5095 to schedule your appointment.

Physical Medicine Center has many Google Reviews, you can find those at [Google.com/Reviews/PhysicalMedicineCenterTampa](https://www.google.com/Reviews/PhysicalMedicineCenterTampa).

Dr. Robert Lupo, D.C.

Dr. Robert Lupo is the clinic director at Physical Medicine Center located in north Tampa near the University of South Florida and New Tampa. Physical Medicine Center is a multidisciplinary medical center that offers Medical Core, Chiropractic Core, and Physical Therapy. Dr. Lupo attended Life University in Marietta Georgia and graduated with a Doctor of Chiropractic degree in 1985. Dr. Lupo has taken post-graduate education in chiropractic orthopedics, neurology, spinal disc injury core, and auto accident and injury core. Physical Medicine Center also offers massage therapy, treatment for dizziness, balance disorders, Spectra cell nutritional blood analysis, bio-identical hormone replacement therapy for men and women and nutritional IV.

GALLBLADDER CANCER

Gallbladder cancer is a rare disease. The American Cancer Society estimates that in the United States, 6,570 women and 5,750 men will be diagnosed with cancer of the gallbladder or nearby large bile ducts in 2023. It occurs more frequently in women than in men, and the incidence is higher for Latinos, Mexican Americans and Native Americans. It is most often found in people over the age of 65; the average age at diagnosis is 72.

A Closer Look

The gallbladder is a small, pear-shaped organ under the liver, located behind the right lower ribs. By adulthood, it is usually about three to four inches long and no wider than one inch. Its basic function is to store bile, a fluid produced by the liver that helps break down fatty foods as they pass through the small intestine.

Interestingly, while the gallbladder helps to digest food, we don't need the organ to live. Many people have their gallbladders removed due to chronic inflammation and go on to live normal lives.

Nearly all gallbladder cancers are adenocarcinomas that start when cells in the inner layer of the gallbladder grow out of control and spread through the outer layer. It is not usually found until it has become advanced and spread outside of the gallbladder and causes symptoms. In fact, only about one of five cases are found in the early stages.

Chronic Inflammation: A Common Risk Factor

Many of the risk factors that make a person more likely to develop gallbladder cancer are related to chronic inflammation in the gallbladder.

The majority of people with gallbladder cancer have gallstones at the time of diagnosis. People with porcelain gallbladder, a condition in which the wall of the gallbladder becomes covered with calcium deposits after long-term inflammation often caused by gallstones, have a higher risk of developing gallbladder cancer.

Even though gallstones are very common, most people with gallstones never develop gallbladder cancer.

Detecting & Diagnosing Gallbladder Cancer

Because there are no signs or symptoms in the early stages, gallbladder cancer is difficult to find and diagnose before it becomes advanced. Its location deep inside the body does not allow for early tumors to be seen or felt during routine physical exams, and there are no blood tests or other screenings that reliably detect early gallbladder cancers.

Symptoms of gallbladder cancer often become known when bile ducts become blocked, and the most common symptoms include:

- Pain in the stomach, often in the upper right part of the belly.
- Jaundice (yellowing of the skin and whites of the eyes).
- Nausea and/or vomiting.
- Lumps in the abdomen.
- Fever.

Other less common symptoms can include:

- Weight loss and/or loss of appetite.
- Abdominal swelling.
- Dark urine.
- Light-colored or greasy stools.
- Itchy skin.

It's important to remember that gallbladder cancer is rare, and many of these symptoms can occur with other more common illnesses. Regardless, it is important to contact your health care provider if you experience any of these problems.

If your doctor suspects gallbladder cancer is present, a complete health history and medical exam will be among the first steps. Blood tests may be ordered to measure liver function and/or the presence of certain substances that can signal disease. A variety of imaging tests, such as CT scan, ultrasound or magnetic resonance imaging (MRI), may also be helpful to confirm a diagnosis.

Treatment

When gallbladder cancer is confirmed and the stage is determined, it is placed into one of two treatment groups.

If cancer is localized, meaning it is found in the wall of the gallbladder, it may be treated with a cholecystectomy, a surgical procedure to remove the organ and some of the tissue around it. If the cancer has spread and cannot be removed, other surgical procedures may be used to drain bile and help relieve symptoms. Radiation therapy and chemotherapy can also be used to destroy cancer cells.

Treatment decisions are also dependent on the age, general health and personal preferences of each patient.

New Treatment Options Through Clinical Trials

Researchers are constantly seeking new ways to treat and prevent cancer, and an important part of that research is informed by clinical trials. These studies, supervised by clinicians who are cancer experts, can offer patients access to safe and effective new treatments that may be better than the existing standard treatments and not available elsewhere. Doctors can guide patients to identify whether a clinical trial exists and may be recommended.

An Ounce of Prevention

Many of the known risk factors for gallbladder cancer are things we cannot control, such as gender, age, ethnicity and bile duct conditions. However, lifestyle habits and choices can help minimize the risk for all forms of cancer:

- Stay physically active and maintain a healthy weight.
- Follow a healthy diet that includes plenty of vegetables, fruits and whole grains, and limits highly processed foods, sugar and red meat.
- If you drink alcohol, limit consumption.
- If you don't smoke, don't start, and if you do smoke, do your best to quit.

Staying in tune with your body and regular checkups with your health care provider increase your chances of staying healthy and identifying cancer and other illnesses early, when treatment options are at their best.

World-Class Cancer Treatment Close to Home About Florida Cancer Specialists & Research Institute, LLC: (FLCancer.com)

Florida Cancer Specialists & Research Institute has built a national reputation for excellence that is reflected in exceptional and compassionate patient care, driven by innovative clinical research, cutting-edge technologies and advanced treatments, including targeted therapies, genomic-based treatment and immunotherapy. Our highest values are embodied by our outstanding team of highly trained and dedicated physicians, clinicians and staff.

Seniors Nutrition Needs: Do You Know What You Should be Eating as You Age?

As we age, our nutritional needs change. Physiological changes in the body cause things such as slower metabolism, less lean body mass, less muscle definition, lower bone density, slower metabolism, basal metabolic deficiency, and lower energy levels. Seniors may also be dealing with health issues on top of their bodies changing needs. Therefore, it's important to map out a custom plan with your doctor or nutritionist to make sure you're getting the most out of your diet. Proper nutrition can help stave off disease, increase cognition, increase strength and endurance and so much more.

Symptoms of Nutrient Deficiencies:

- Weight loss
- Decreased appetite
- Uninterested in hydrating
- Irritability
- Lack of concentration
- Feeling cold
- Loss of muscles and strength
- Prone to illness
- Inability to fight infection
- Impaired wound healing
- Depression
- Cognitive decline and confusion

Protein is critical as we age.

The aging body processes protein less efficiently than when we were younger. This isn't just true for the elderly that might be ill or facing chronic conditions, but for all seniors.

A 2013 study recommends that healthy older adults consume 1 to 1.2 grams of protein per kilogram of body weight per day. For the average woman that is about 70 grams and for a male, 100 grams of protein per day.

A few examples of what our diets offer in grams of protein is as follows:

- 4 oz chicken breast = 25 grams
- 2 eggs = 12 grams
- 2 oz cheese = 14 grams
- ½ cup of chickpeas (garbanzo beans) = 18 grams
- 1 cup leafy greens = 9 grams
- 1 cup broccoli = 2.6 grams
- 1 oz mixed nuts = 5 grams
- 1 cup of oatmeal = 6 grams
- 8 oz cow's milk = 8 grams
- 8 oz almond milk = 1 gram

If you are having difficulty meeting your nutritional needs or have symptoms of nutritional deficiencies, adding in protein powders is also an alternative to whole food consumption that will help you meet your nutritional goals. Again, talking to a medical professional about what's best for you is essential.

The folks at Aston Gardens at Tampa Bay have perfected senior community living and offer extensive opportunities and events for their residents to enjoy throughout each day of the month.

Aston Gardens' Independent Living Features Include:

1. No maintenance
2. No more snow shoveling
3. No more yard work
4. Fine dining and chef-prepared meals
5. Convenience to shopping, the arts, sporting events, restaurants, pharmacies, medical care and much more
6. Safety and security of a gated community
7. Ongoing activities and events
8. Friendly staff and fantastic neighbors
9. Fabulous, resort-quality amenities

At Aston Gardens, they offer several options that suit multiple needs for each individual or couple.

Aston Gardens' Senior Living Options at Our Tampa Bay Campus

In our beautifully appointed Tampa, Florida retirement community, we offer the following senior living options:

- **Independent Living** – Stay active through daily events, outings, and recreational opportunities while enjoying the peace of mind of having on-site staff
- **SHINE® Memory Care** – In our memory care program, residents will receive personalized attention and assistance with everyday living activities as needed
- **Senior Assisted Living** – Suitable for residents who need a little, extra assistance with daily tasks like medication management, personal grooming, and household chores

Aston Gardens is one of the most highly sought-after communities due to their dedication to senior needs, their commitment to enriching the lives of each resident and their families by providing personalized care, welcoming living spaces, and superior amenities.

Aston Gardens At Tampa Bay

Aston Gardens is a luxury senior living community offering the best combinations of active-adult lifestyles and personalized care services. Wake up inspired each morning with a wealth of amenities, activities, and support at your doorstep. Explore the stylish Grande Clubhouse and indulge in our unique lifestyle services: Sensations Dining, Celebrations Activities and Dimensions Wellness. Let our dedicated team members handle transportation, maintenance, housekeeping, concierge services and more. Here you will find compassionate people engaged in enriching the lives of seniors, ensuring their needs are taken care of every day. Aston Gardens At Tampa Bay offers the best value in affordable, carefree, senior living. Everything we do is focused on providing you the very best in senior living. It's all right here!

See why so many people want to call
Aston Gardens their home!

Dr. Sunil Panchal

A PATIENT'S EXCRUCIATING BACK AND LEG PAIN...

Relieved in One Day!

One year ago, David was lifting a fire pit in his back yard and fell to the ground in infuriating pain. He could not get up as the pain was completely unbearable. EMS transported him to the emergency room, and he was admitted to the hospital. David had a herniated disc and was prescribed pain medications and discharged.

"The pain medications worked for a while, but eventually, the pain returned, and I had excruciating pain in my left leg as well." Said David.

After seeing multiple doctors, including a spine surgeon, and getting CT scans, ultrasounds, and MRIs, no one could figure out why David's pain was so immense, and they also had no idea why his left leg was painful, even more so than his back. Unable to accurately diagnose and treat him, David was left to suffer for another five months.

His Primary care physician finally referred him to a pain specialist that has been helping numerous patients find relief through regenerative and alternative procedures. Dr. Panchal is the founder of the National Institute of Spine and Pain.

David continued, "At the very first visit that I had with Dr. Panchal, he looked over my images and immediately knew the root cause of my pain, and he explained to me in full detail exactly what he needed to do to relieve it."

From the images, Dr. Panchal saw that David had a nerve that was being impinged and compressed by spinal neural foraminal stenosis of L3. Spinal neural foraminal stenosis refers to the narrowing of the foramen, which are small openings between each vertebra in the spine. Nerve roots pass through the foramen, so in David's case, his nerve was severely compressed in the gap and causing him unyielding leg pain along with lower back pain.

Dr. Panchal explained that David needed a procedure to shave the disc down to relieve the pressure on the nerve. The procedure is called endoscopic discectomy and decompression of the nerve root.

This procedure is performed while the patient is under light anesthesia, which allows open communication for patients to express pain thresholds with Dr. Panchal. David was not happy about having to have any surgery, even though Dr. Panchal explained that it was minimally invasive. After two months, David decided he needed to do it to relieve his daily pain that was disrupting his life.

David told us that after the surgery, which was this past December, he has no pain! David no longer needs pain medications, and he is back to living the quality of life that he and his family enjoy, pain-free with complete resolution.

Endoscopic discectomy and decompression is an outpatient procedure done under x-ray fluoroscopy to remove herniated disc material through a small, half-inch incision. It's done under light sedation and local anesthetic.

A 3-D video is used to guide guidance, tiny instruments through an endoscopic probe. The procedure takes approximately an hour and causes minimal discomfort, and a small bandage is usually enough for the closure of the tiny incision.

Dr. Sunil Panchal of the National Institute of Spine and Pain has been committed to regenerative medicine and stem cell therapy for several years. Dr. Panchal explains exosome therapy further, "This is an exciting new approach for regenerative medicine. Unlike PRP which has limited growth factors, or bone marrow and fat aspirate, which has an unknown quantity of stem cells, or growth factors from the patient, or the use of fetal cord blood stem cells (which has unknown function after thawing and also the risk

of tumor formation from foreign DNA), exosomes are a highly concentrated and reproducible source of growth factors for regenerative techniques.

"The other approaches typically take six months to see any results. With exosomes, I've had some patients begin to notice improvement as early as 2-3 weeks. And since this is an acellular product, there is no risk of tumor development." said, Dr. Panchal.

Dr. Panchal has treated patients with exosome therapy for pain in the cervical and lumbar facet joints, sacroiliac joints, knees, hips, ankles, elbows, shoulders, ligament injuries, and also degenerative discs. These tiny exosome communicators that secrete therapeutic and regenerative effects to the cells and tissues throughout the body are becoming highly-sought-after by many patients that have suffered from pain and chronic disorders. Some of the additional findings within peer-reviewed studies are as follows:

- Self-Renewing Capabilities
- Cellular Differentiating Ability
- Tissue Repair
- Anti-Inflammatory Effect
- Immunosuppression
- Neuroprotection

Although surgery is critical in certain situations, finding alternative methods to treat the underlying condition is always the first step. The National Institute of Spine and Pain is a state-of-the-art facility that specializes in the treatment of spine and orthopedic conditions, as well as acute and chronic pain management. They provide the utmost quality of care for patients to address the problem directly, and if needed, provide for their pain management needs.

At The National Institute of Spine and Pain, they treat each patient individually, using the latest equipment and various innovative procedures to diagnose pain and determine your care needs. The National Institute of Spine and Pain's President and Founder, Sunil J. Panchal, MD, is a board-certified interventional pain/ minimally invasive spine physician.

At The National Institute of Spine and Pain, their goal is to strive to deliver the highest quality of comprehensive care for those who are suffering from spine, joint, and nerve injuries. They have many alternatives to help you with your personalized treatment needs. Please visit their website at www.nationalinstituteofpain.org, or call them at (813) 264-PAIN (7246).

WHOLEHEARTED

By Jodi Thomas

I love Valentine's Day. Not just the flowers and the chocolate and all that good stuff, but I have always loved the idea of celebrating *love* . . . and on a trivial note, seeing all the pink and red hearts just makes me happy for some reason.

Lately I've been thinking a lot about my own heart. When reflecting on 2023 and what I hope for this year, I really desire to live *wholeheartedly*. And the first step in doing this is learning to pay attention to my **heart**. I'm reading a great book right now called *Soulful Simplicity* by Courtney Carver. I highly recommend it. In the book, she discusses living wholeheartedly and that we have to learn to *listen* to our hearts. She has an exercise where in a quiet moment, you place both hands on your heart, one hand on top of the other, and just sit in the quiet for a moment or two, and ask yourself, "What is my heart saying? What is my heart feeling?"

Yet, most of us are terrified to do this. Why? Because, without a doubt, most of us are never taught to listen to our hearts. We are taught to "suck it up," to keep pushing forward, to fulfill our myriad responsibilities, regardless what our hearts might be saying, or trying to say. And there are many times where we have to do just that—it's part of being an adult. But there's an equal, if not more, need for us to listen to those precious hearts of ours, that have often long been covered up by obligation, fear of what other people think, busy-ness, and self-medication with our vices of choice.

The primary reason we need to learn to listen to our hearts are that our hearts are **very important to God**. Proverbs 4:23 says, "Above all else, guard your heart, for everything you do flows from it." Think about what that says and the implication of it. Both good and bad flow from our heart, based upon the state of our heart. Ignore your heart for too long, and this is disastrous for living the kind of life that you once imagined for yourself.

In fact, our hearts are so valuable to God that they are the very place that Christ has decided to take up residence. Ephesians 3:17 says, "I pray that out of his glorious riches he may strengthen you with power through his Spirit in your inner being, so that Christ *may dwell in your hearts through faith*." Additionally, Romans 5:5 says that God pours out His love into our hearts. Now, I spend a lot of time nurturing my relationship with God. But to be completely honestly, many times I don't feel God's presence or love. These are things that I have to take *by faith*. But even this comes from the heart, for Romans 10:10 says "For it is *with your heart that you believe* and are justified, and it is with your mouth that you profess your faith and are saved."

When I truly believe these truths, which comes from my very heart, that Christ actually lives in my heart and God's love is poured into my heart, I am empowered to live in God's love and to express that love to others in my day to day life. And folks, there is just nothing in life more important than that.

Not only does God reside in our heart, he desires to protect it. Philippians 4:7 says "And the peace of God, which transcends all understanding, *will guard your hearts* and your minds in Christ Jesus." How does the peace of God guard our heart? It guards it against worry, against anxiety, against unforgiveness. . . all of the things that wreck havoc on our hearts and create stress in our lives.

Our hearts are so valuable to God, that He desires *all* of our hearts. In Luke 10:27, Jesus said the greatest commandment was to "*Love the Lord your God with all your heart* and with all your soul and with all your strength and with all your mind."

When you see those pretty pink and red hearts this Valentines Day, I hope you are reminded that your heart is a unique treasure to God. There is no other heart like yours. It is so valuable to Him that Jesus died on the cross so that He could live there and God's love be poured out into your heart. Because your heart is of the utmost value to God, you need to value it, too. Learn to listen to it. Learn to respect it. Don't ignore it. I hope you will join me in the quest of living *wholeheartedly* in 2023.

We Are The Right Place To Be Right Now

As a company that's served the best interests of seniors for nearly 30 years, we are no stranger to emergency management. Our commitment to the health and safety of our residents has long been paramount, and although COVID-19 is a new threat, it is by no means the first one we've faced head on.

In any emergency situation, it's imperative to know where trusted resources can be found. For seniors and families specifically, the importance of safeguards required for COVID-19, in many ways highlight the numerous benefits of living in a supportive community setting like the many we offer.

By leveraging extensive prior experience, financial strength, innovative technology and national buying power, we can provide the resources and forward thinking necessary to implement Enhanced Protocols and Operational Procedures immediately at our communities nationwide. We believe you or your loved one can be as confident as we are in our strategies to combat the spread of this virus.

- All Services and Amenities are Provided Onsite. *This Includes Chef-Prepared Dining, Activities, Social Events, & More*
- Ability to Deliver Onsite Healthcare Services
- Long-Standing Preventative Measures and Expansive Healthcare Supply Inventory
- Access to Industry Associations and the Latest News and Information
- National Buying Power and the Resources to Obtain High-Demand Healthcare Products
- Enhanced Operational Procedures and Protocols in Place From the Onset
- Fully Prepared to Enact New/Expanded Safety Measures
- Community-Wide Preventative Efforts Include Ongoing Cleaning, Sanitization and Housekeeping
